

LEGAL EASE

Project Design Phase

Project Objective: To design a simple, user-friendly, and accessible system that helps users find and understand general legal information.

1. System Design

The Legal Ease system is designed with a clear structure so users can easily search for legal topics, read simple explanations, and access useful official resources.

2. User Interface Design

- Simple and clean home page.
- Easy navigation menu for different legal topics.
- Search box for finding relevant information.
- Clear headings, buttons, and readable content.
- Mobile-friendly layout for convenient access.

3. System Modules

- **Home Module:** Provides an overview of Legal Ease and its purpose.
- **Search Module:** Helps users find legal topics and information.
- **Legal Information Module:** Displays selected legal concepts in simple language.
- **FAQ Module:** Provides answers to commonly asked questions.
- **Resource Module:** Provides links to relevant official resources.

4. Data Design

Legal topics, explanations, FAQs, and resource information are organized in a structured way so that the application can retrieve and display relevant content efficiently.

5. Navigation Design

The navigation flow is designed to be simple: Home → Search or Topic Selection → Legal Information → Related FAQs/Resources. Users should be able to return to the main sections easily.

6. Design Considerations

- Keep the interface simple for users with limited technical knowledge.
- Use clear and understandable language.
- Present general legal information responsibly.
- Protect user information if any personal data is collected.

- Encourage users to consult qualified legal professionals for specific legal advice.

7. Expected Outcome

The project design phase provides the structure and interface plan for developing Legal Ease. The design focuses on simplicity, easy navigation, organized information, and responsible access to general legal resources.
